

# Axel Jacobsen

axel-jacobsen.github.io | axelnjacobsen@gmail.com

**LANGUAGES** Advanced in **Python** experienced in **C Javascript** learning **Julia Lisp Rust**  
**DEEP LEARNING** Designing, training, and deploying neural networks on a low-cost instrument to diagnose malaria

## RELEVANT EXPERIENCE

### CHAN-ZUCKERBERG BIOHUB | ASSOCIATE R&D ENGINEER | MAR 2022 - PRESENT

- Designing, training, and deploying a custom object detection network to diagnose malaria real-time on limited compute, as well as a simple convolutional network to determine focal drift
- Writing protocols for automated cell-splitting, including designing an algorithm to speed up aliquots

### CHAN-ZUCKERBERG BIOHUB | R&D ENGINEERING INTERN | JUN 2020 - DEC 2020, JUL 2021 - DEC 2021

- Rewrote codebase of the Opentrons OT-2, an open-source pipetting robot
  - Designed tests to measure drift of OT-2, accurate to 1  $\mu\text{m}$  over  $\sim 1\text{ m}$ , using cross-correlation
  - Simplified software, reduced size by  $\sim 60\%$  while maintaining previous functionality
- Designed and ran tests to measure drift of OT-2, accurate to 1  $\mu\text{m}$  over  $\sim 1\text{ m}$ , using cross-correlation
- Wrote an ADC driver for a low cost luminometer to detect COVID-19 antigens, deployed in Bangladesh

### WILDLIFE COMPUTERS | ENGINEERING INTERN | MAY 2019 - AUG 2019

- Designed an isolator PCB to isolate digital lines from sensitive measurement devices, allowing low-noise and accurate voltage measurements
- Wrote C++ to test PCBs that arrive from fabrication - autonomously verifies PCB component placement to increase production throughput

### CONTROL MOBILE | DATA SCIENCE CO-OP | JAN 2018 - APR 2018

- Wrote Python scripts to analyze and rank order over 300 individual SQL queries by their runtime to optimize the SQL database; reduced the runtime to fetch and display customer data by 65%
- Worked with the backend team to fix existing bugs, write new code, and refactor current code

## PROJECTS

### DEEP LEARNING

- Asynchronous Advantage Actor-Critic Model written in Pytorch, optimized for multicore CPUs via multiprocessing
- LSTM-based Deep Q-Network, trained on Denmark Technical University's High-Performance Computing Cluster

### ENGINEERING PHYSICS AUTONOMOUS ROBOT COMPETITION

- Designed and created an autonomous robot from scratch in 8 weeks, capable of navigating a complex and dynamic course
- Implemented signal processing software to detect specific IR frequencies with sub-millisecond detection time
- Wrote (in C) driver software for the robotic arm / claw, as well as software for high-level control loops of robot

## EDUCATION

### UNIVERSITY OF BRITISH COLUMBIA | B.ASC ENGINEERING PHYSICS, GRADUATED MAY 2022

*Coursework includes* Lagrangian Mechanics, Computational Modelling, Digital Systems and Microcomputers, Signals and Systems, Applied Quantum Mechanics, Linear Algebra, Honours Multivariable and Vector Calculus, Complex Analysis, Optics, Statistical Mechanics

### DENMARK TECHNICAL UNIVERSITY | EXCHANGE SEMESTER, WINTER 2019

*Coursework includes* Operating Systems, Deep Learning, Robotics, Computationally Hard Problems. Won DTU OS Course Competition for writing the fastest reverse hash server in C
